Senior Full Stack Developer with 5+ years of experience building scalable web applications and internal systems across fintech lead generation, healthcare, and SaaS environments. Proven track record of automating workflows, improving system reliability, and leading small engineering teams. Strong background in Node.js, React, Next.js, MongoDB, and system design.

WORK EXPERIENCE

Company: Forbes Advisor (Expertise.com) **Feb 2026 – Present**
Position: **Senior Software Engineer**

- Developed lead capture journeys for multiple Forbes.com verticals using server-rendered Lit, TypeScript, and Koa, part of a multi million dollar partner lead generation platform.
- Launched partner branded microsites and custom results pages by turning Figma designs into reusable web components wired to Salesforce configured content, expanding the white label funnels the platform could support.
- Integrated third party systems into the lead pipeline, including Spinwheel identity and credit verification, Leadspedia lead submission, and campaign attribution, so verified consumer data reached downstream buyers without manual handoffs.
- Built end to end synthetic monitoring for critical journeys with Playwright and New Relic, then automated new monitor registration through a CI/CD GitHub Action using New Relic's GraphQL API.

Company: Theoria Medical **Aug 2023 – Feb 2026**
Position**: Senior Full Stack Developer**

- Spearheaded the adoption of End-to-end testing and automated CI/CD pipelines for a 3-man team, reducing production deployment errors and establishing a culture of peer code reviews.
- Collaborated with a senior engineering team to execute a massive infrastructure optimization of our medical platform; leveraged Microsoft Azure Application Insights to identify application bloat, successfully consolidating the environment from 90 servers (VMs) down to 10.
- Automated our application uptime monitoring and logging workflow and integrated it into our Slack workplace to provide 100% notification coverage related to our outages and improve response time.
- Redesigned the syncing process of our applications to use a currently available service, which resulted in 100+ hours of manual labor saved each week.

Position: **Full Stack Developer** **Jun 2022 – Aug 2023**

- Collaborated in a 5-member team to build a product from the ground up that integrated with a collaborating team's existing product.
- Optimized codebase by finding major code errors and code smells, one of which caused hundreds of thousands of duplicate documents in our MongoDB database.
- Developed the entire notification and push notification system for a messaging application that integrated with the main service we provided.

Company: Group 61 **Jun 2020 – Jan 2021**
Position: **Web Developer**

- Introduced the implementation of an email API and website hosting that eventually cut the total monthly costs by 40% before the change.
- Spearheaded communication with stakeholders to obtain requirements and discuss product delivery promptly, with a 100% completion rate on every planned sprint.
- Translated and worked with ui/ux to accurately transfer mockups into actual web pages that were used in day-to-day business.

EDUCATION

Cebu Institute of Technology - University **May 2022**
BS IT

SKILLS

Languages: JavaScript, TypeScript, Java, **Frameworks**: NodeJS, NextJS, Nest, React, Lit / Web Components, Express, GraphQL, **Tools/Technology**: Git, Azure, CI/CD, Storybook, New Relic, Unix, Selenium, Elasticsearch, Playwright, Cypress, **Databases**: MongoDB, MySQL, PostgreSQL. **Relevant:** CSS/SCSS, Tailwind
